

Amazon AI for every developer

Julien Simon, AI Evangelist, EMEA
@julsimon

Myth - AI is dark magic

aka « You're not smart enough »

Fact - AI is math, code and chips

A bit of Science, a lot of Engineering

```
data = mx.symbol.Variable('data')
conv1 = mx.sym.Convolution(data=data, kernel=(5,5), num_filter=20)
relu1 = mx.sym.Activation(data=conv1, act_type="relu")
pool1 = mx.sym.Pooling(data=relu1, pool_type="max", kernel=(2,2), stride=(2,2))
conv2 = mx.sym.Convolution(data=pool1, kernel=(5,5), num_filter=50)
relu2 = mx.sym.Activation(data=conv2, act_type="relu")
pool2 = mx.sym.Pooling(data=relu2, pool_type="max", kernel=(2,2), stride=(2,2))
flatten = mx.sym.Flatten(data=pool2)
fc1 = mx.symbol.FullyConnected(data=flatten, num_hidden=500)
relu3 = mx.sym.Activation(data=fc1, act_type="relu")
fc2 = mx.sym.FullyConnected(data=relu3, num_hidden=10)
lenet = mx.sym.SoftmaxOutput(data=fc2, name='softmax')
```

Our mission

Put AI and Machine Learning in the hands of
every developer and data scientist

Amazon Rekognition Video

Deep Learning-based video analysis service

(GA)

Video Analysis Service

<https://aws.amazon.com/blogs/aws/launch-welcoming-amazon-rekognition-video-service/>

Amazon Rekognition Video Customers

Butterfleye is a cordless security camera for business and home. We believe in smart solutions to protect your business, and your privacy. We develop security platforms that combine activity-based recording, facial recognition and military-grade technology to decide when to record and when to disarm, placing our products at the optimal intersection of security and privacy.

"Butterfleye's mission is to deliver a smart security camera, with real time alerts. Amazon Rekognition Video's real-time face recognition from video live stream will allow us to provide accurate and critical alerts back to our customers. The simple API makes integration with our smart platform fast and easy."

Govind Vaidya, VP of Software Engineering, Butterfleye Inc.

City of Orlando Police Department. OPD is a nationally recognized law enforcement agency that is focused on the safety of our residents, visitors, and businesses. Our job is to protect the citizens of Orlando.

"The City of Orlando is excited to work with Amazon to pilot the latest in public safety software through a unique, first-of-its-kind public-private partnership. Through the pilot, Orlando will utilize Amazon's Rekognition Video and Amazon Kinesis Video Streams technology in a way that will use existing City resources to provide real-time detection and notification of persons-of-interests, further increasing public safety, and operational efficiency opportunities for the City of Orlando and other cities across the nation.

John Mina Police Chief, City of Orlando

Scripps Networks Interactive is a leading developer of engaging lifestyle content in the home, food and travel categories for television, the internet and emerging platforms. Our U.S. lifestyle portfolio comprises popular television and internet brands HGTV, DIY Network, Food Network, Cooking Channel, Travel Channel and Great American Country, which collectively engage more than 190 million consumers each month.

"Licensing media assets is essential to Scripps Networks, Interactive. Consistent and accurate media metadata enables our enterprise and customers to quickly find what they want. Human-based metadata tagging is time-consuming and tedious, and productivity and efficiency can be greatly increased through automation. Amazon Rekognition enables us to quickly and efficiently add value through various automated metadata tagging processes, and images and video segments are much easier to find for our enterprise and our customers. This allows us to increase cycle times, productivity, and efficiency, and adds revenue opportunities that benefit our bottom line".

Shane Murphy – Solutions Engineer, Scrippsnetworks

Amazon Translate

Neural Machine Translation Service

(Preview)

Automatically translates text between languages

Real-time translation

Powered by Deep
Learning

12 Language pairs
(more to come)

<https://aws.amazon.com/blogs/aws/introducing-amazon-translate-real-time-text-language-translation/>

Supported languages

- You can translate from English to 6 languages (and vice versa)
- Arabic (ar)
- Chinese (Simplified) (zh)
- French (fr)
- German (de)
- Portuguese (pt)
- Spanish (es)

```
aws translate translate-text
--text "Hello, world"
--source-language-code "en"
--target-language-code "zh"

{
  "TargetLanguageCode": "zh",
  "TranslatedText": "你好，世界",
  "SourceLanguageCode": "en"
}
```

Amazon Translate customers

Isentia, headquartered in Sydney, Australia, is a leading media-intelligence provider for the Asia-Pacific region. The company operates from 18 offices across the region and supports more than 5,000 clients worldwide, including 84 of the world's top 100 brands. Isentia's products help customers make more informed and timely business and communication decisions.

"At Isentia, we built our media intelligence software in a single language. To expand our capabilities and address the diverse language needs of our customers, we needed translation support to generate and deliver valuable insights from non-English media content. Having tried multiple Machine Translation services in the past, we are impressed with how easy it is to integrate Amazon Translate into our pipeline and its ability to scale to handle any volume we throw at it. The translations also came out more accurate and nuanced and met our high standards for clients."

Andrea Walsh - CIO, Isentia

Hotels.com is a leading online accommodation booking website with properties ranging from international chains and all-inclusive resorts to local favorites and bed & breakfasts, together with all the information needed to book the perfect stay

"At Hotels.com, we are committed to offering all of our customers the most relevant and up to date information about their destination. To achieve that, we operate 90 localized websites in 41 languages. We have more than 25M Customer reviews and more are coming in every day, making a great candidate for machine translation. Having evaluated Amazon Translate and several other solutions, we believe that Amazon Translate presents a quick, efficient and most importantly, accurate solution. We want to take advantage of the latest advances in machine learning and the transition to Neural engines to further personalize and localize our reviews, and generally improve our customer experience. Amazon Translate is a step forward in that direction."

Matthew Fryer - VP and Chief Data Science Officer, Hotels.com

The accompanying shots from the **Newcastle Herald**'s award-winning team of photographers are worth **more than 1000 words** apiece. But that's the maximum number of words you will require to have a shot at winning the **Herald's sixth annual short story competition**. It's time to let your inner author off the leash and **allow** your imagination to run wild. Stories can be of any genre but must be your own work. The plot must draw inspiration in some way from **one** of these **four images**. Herald photographers **Simone De Peak**, **Marina Neil**, **Jonathan Carroll** and **Max Mason-Hubers** captured the evocative pictures. Stories submitted for the competition must be between **900** and **1000 words**. Judges include **Newcastle Writers Festival** director **Rosemarie Milsom**, **Herald** deputy editor **Matt Carr**, **Hunter Writers Centre** director **Karen Crofts** and president **Megan Buxton**, and **Fairfax Media's Newcastle-Hunter** group managing editor **Chad Watson**.

Support for large data sets and topic modeling

Amazon Comprehend customers

Hotels.com is a leading global lodging brand operating 90 localized websites in 41 languages.

"Providing locally relevant personalized travel experiences is the goal at Hotels.com. Hence helping our customers find the right experience is crucial. Amazon Comprehend helps us analyze the key sentiments, objects, and geos in our 30 million plus reviews & testimonies. Now we are able to discover new insights into the unique experiences available at each property, so our customers can make the best decision possible for their travel."

– Matt Fryer, VP and Chief Data Science Officer of Hotels.com and Expedia Affiliate Network

The Washington Post is an American daily newspaper.

"The Post strives to give its nearly 100 million readers the best experience possible and relevant content recommendations are a key part of that mission. With Amazon Comprehend, we can leverage the continuously-trained NLP capabilities like Keyphrase and Topic APIs to potentially allow us to provide even better content personalization, SEO, and ad targeting capabilities."

– Dr. Sam Han (PhD), Director of Data Science at The Washington Post

Elementum is an online platform that unifies procurement, logistics, manufacturing, and inventory operations in real time.

"Natural language processing (NLP) is hard. We've looked at everything from closed to open source solutions to analyze and make sense of our data, but couldn't find a practical solution that would allow us to stay agile, scalable, and cost-effective as it relates to NLP. Amazon Comprehend's continuously-trained model allows us to focus on our business and innovate in Supply Chain Management (SCM)"

– Minh Chau, Head of Engineering at Elementum

Infor is an enterprise software provider and strategic technology partner for more than 90,000 organizations worldwide.

"Building intelligent applications to help customers drive their businesses is our entire focus. Amazon Comprehend allows us to analyze unstructured text within search, chat, and documents to understand intent and sentiment. This capability enables us to train our Coleman AI skillset, and also provide a truly focused and tailored search experience for our customers."

– Manjunath Ganimasty, V.P. Software Development with Infor

Amazon EC2 P3 Instances (October 2017)

The fastest, most powerful GPU instances in the cloud

- Up to eight NVIDIA Tesla V100 GPUs
- 1 PetaFLOPs of computational performance – *14x better than P2*
- 300 GB/s GPU-to-GPU communication (NVLink) – *9X better than P2*
- 16GB GPU memory with 900 GB/sec peak GPU memory bandwidth

AWS Deep Learning AMI

- Easy-to-launch tutorials
- Hassle-free setup and configuration
- Pay only for what you use
- Accelerate your model training and deployment
- Support for popular Deep Learning frameworks
