AWS User Group Turkey

# What to expect from the session

---

The Amazon DevOps story

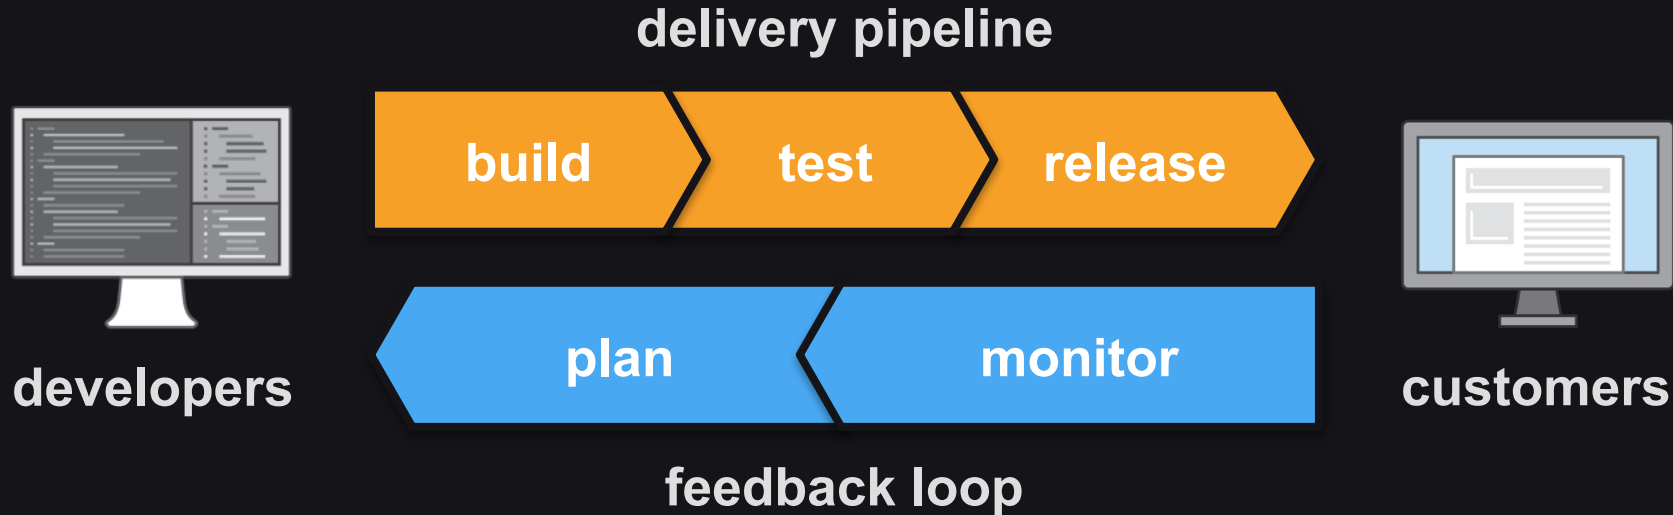

Developer tools for everyone

- AWS CodeDeploy
- AWS CodePipeline
- AWS CodeCommit

End-to-end demo with a simple web application

# What is DevOps?

## Software development lifecycle

**DevOps** = anything that automates, accelerates, strengthens this lifecycle

# The Amazon DevOps story

# Monolith development lifecycle

**developers**

**app**

**delivery pipeline**

Service-Oriented  
Architecture (SOA)

Single-purpose

Connected through APIs

Highly decoupled

“Microservices”

Two-pizza teams

Full ownership

Full accountability

Aligned incentives

“DevOps”

# Missing tools

delivery pipeline

Self-service

Technology-agnostic

Encourage best  
practices

Single-purpose services

Deployment service

No downtime  
deployments

Health tracking

Versioned artifacts and  
rollbacks

# Pipelines

Continuous delivery

Automated release  
process

Faster and more reliable  
releases

>90% of teams

# Microservice development lifecycle

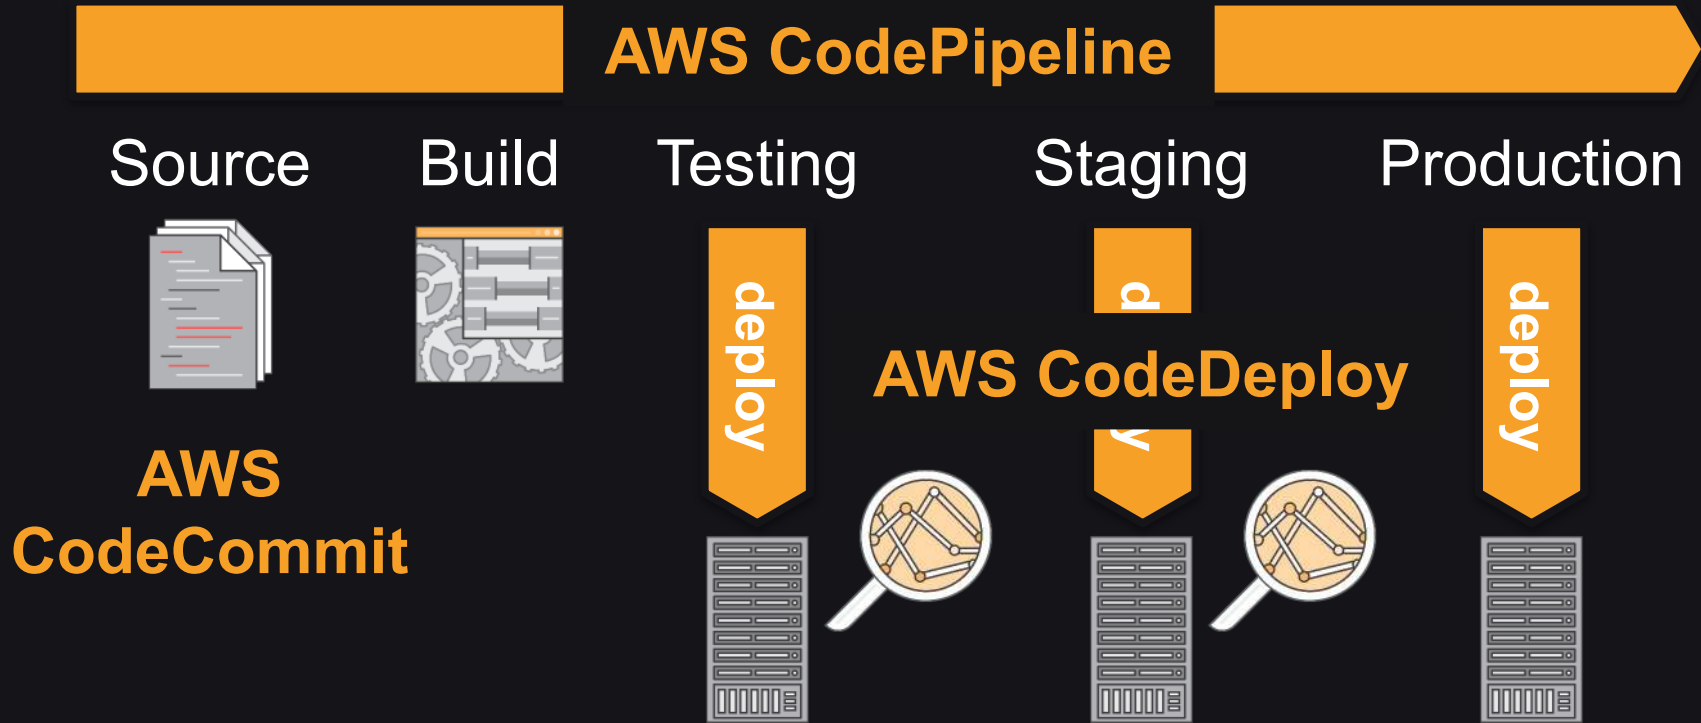

- 
- Thousands of teams**
- × Microservice architecture**
  - × Continuous delivery**
  - × Multiple environments**
- 

**= 50 million deployments a year  
(1.5 deployment every second)**

How can others do this?

# Setting up a delivery pipeline

# AWS Code Services

# AWS CodeCommit

Use standard Git tools

Scalability, availability, and durability of Amazon S3

Encryption at rest with customer-specific keys

# AWS CodeDeploy

Easy and reliable deployments (zero downtime)

Scale with ease

Deploy to any server

# AWS CodeDeploy and EC2 Instances

- CodeDeploy requires an **agent**, available for Linux and Windows
- CodeDeploy can deploy to:
  - **On-premise instances** (configuration required)
  - **Existing EC2 instances** (configuration required)
  - **New EC2 instances** pre-configured for CodeDeploy thanks to a CloudFormation templates (no configuration required)

# AWS CodeDeploy Key Components

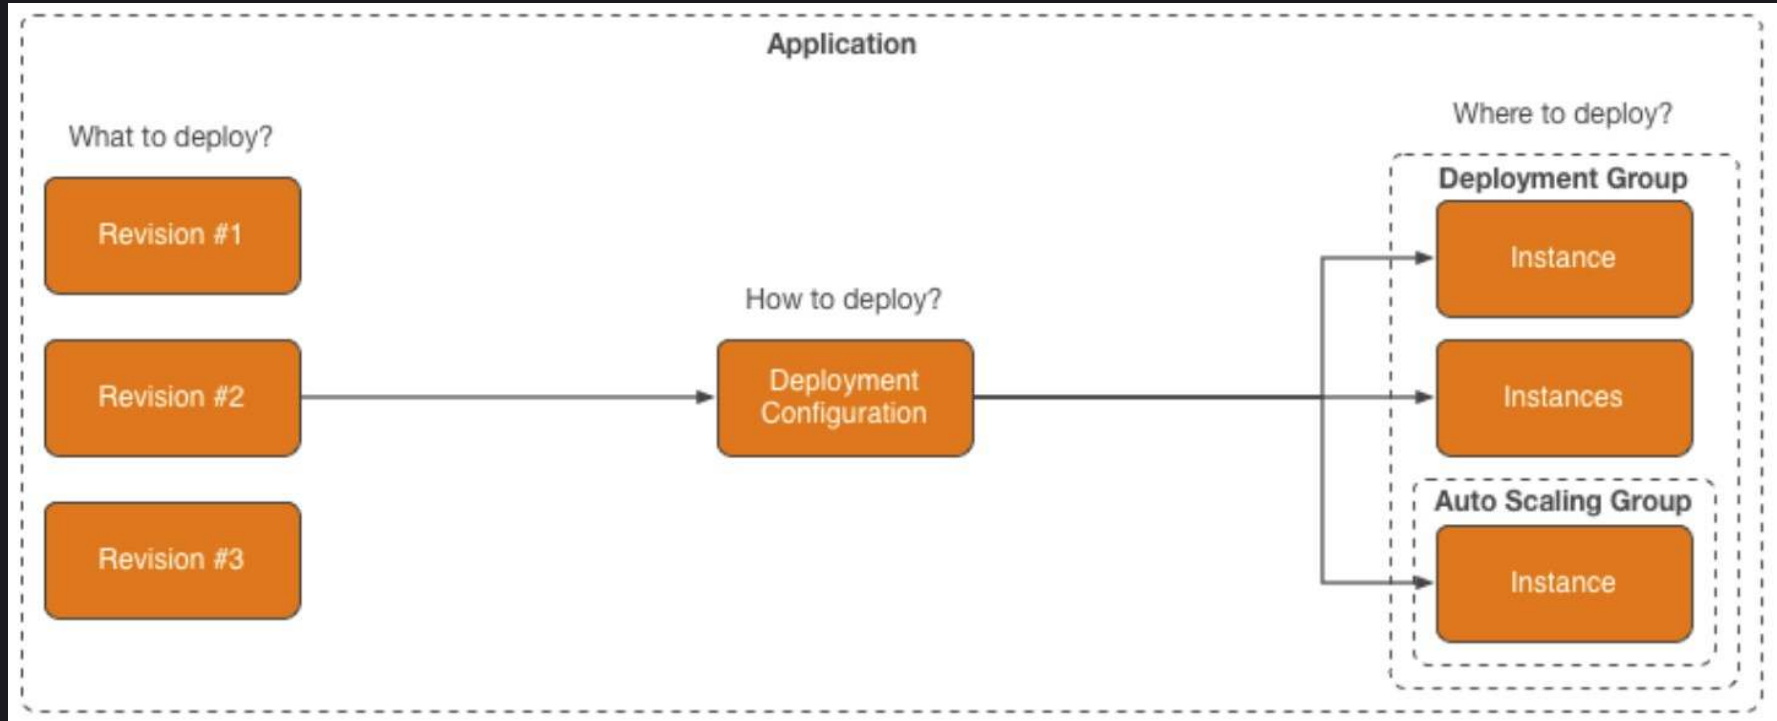

**Revision:** versioned **code** + application **specification** file (AppSpec)

**Deployment group:** a set of individual **instances** with a specific **tag**

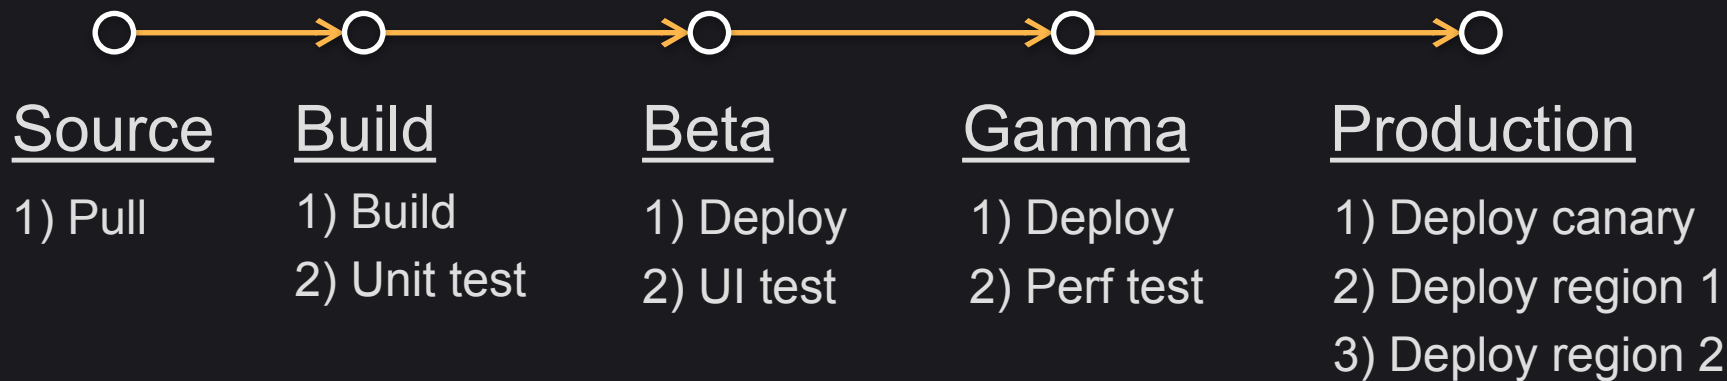

**Deployment configuration:** a set of **rules** and **conditions** used during a deployment

**Application:** a **name** pointing to a **revision**, a **deployment group** and a **deployment configuration**

# AWS CodeDeploy Key Components

# AWS CodePipeline

Connect to best-of-breed tools

Accelerate your release process

Consistently verify each release

# AWS CodePipeline Key Components

**Stage:** a specific **part** of the pipeline (source, build, etc.), containing a sequence of **actions**

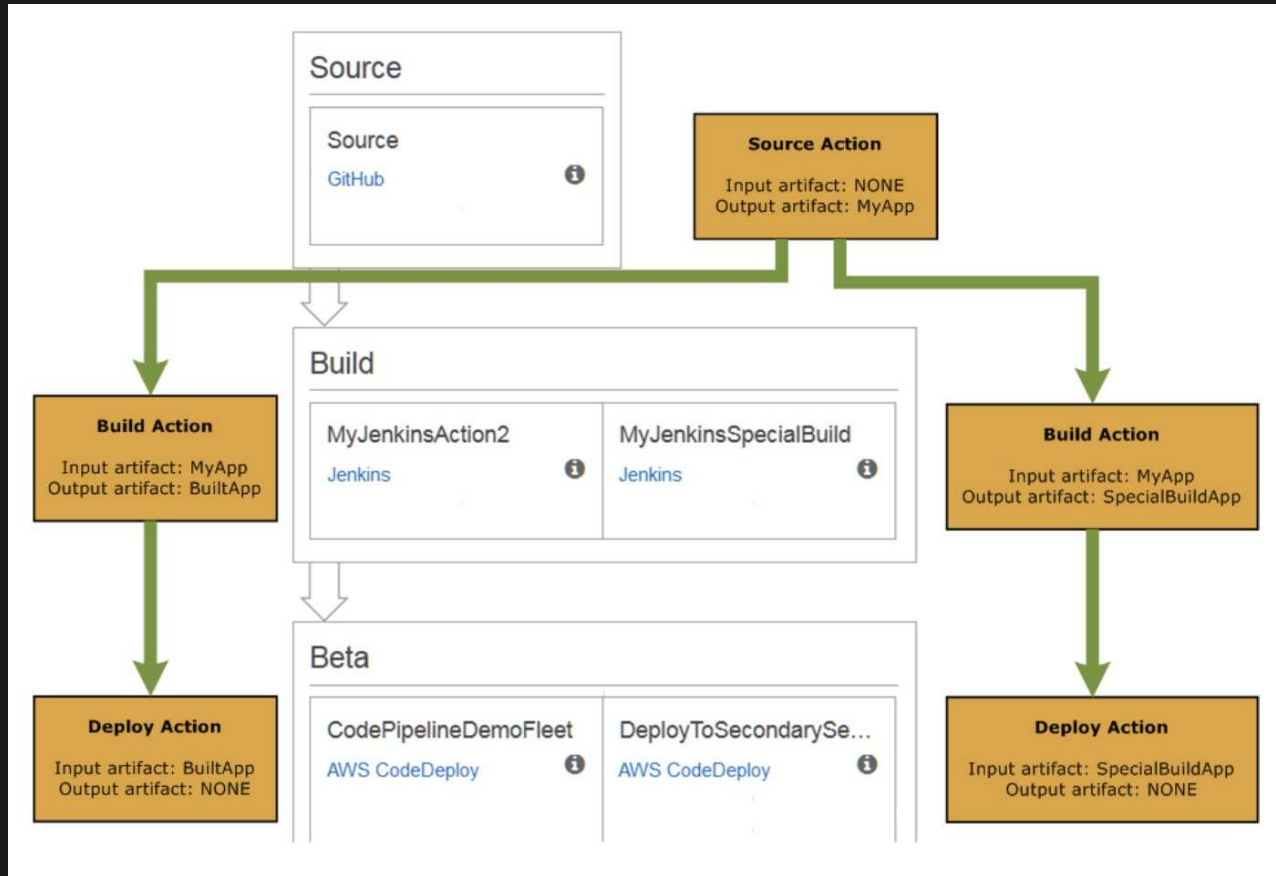

**Action:** a **task** performed on an **artifact** in a **stage**. Actions occur in a specified **order**, in **sequence** or in **parallel**

**Revision:** a **change** made to a **source** that is configured in a **source action**

**Transition:** **moving** a revision to the **next stage** in the pipeline

# AWS CodePipeline Key Components
