# Machine learning cycle

# Successful models require high-quality data

# Successful models require high-quality data

# Amazon SageMaker Ground Truth

<https://aws.amazon.com/blogs/aws/amazon-sagemaker-ground-truth-build-highly-accurate-datasets-and-reduce-labeling-costs-by-up-to-70>

Quickly label  
training data

Easily integrate  
human labelers

Get accurate  
results

## KEY FEATURES

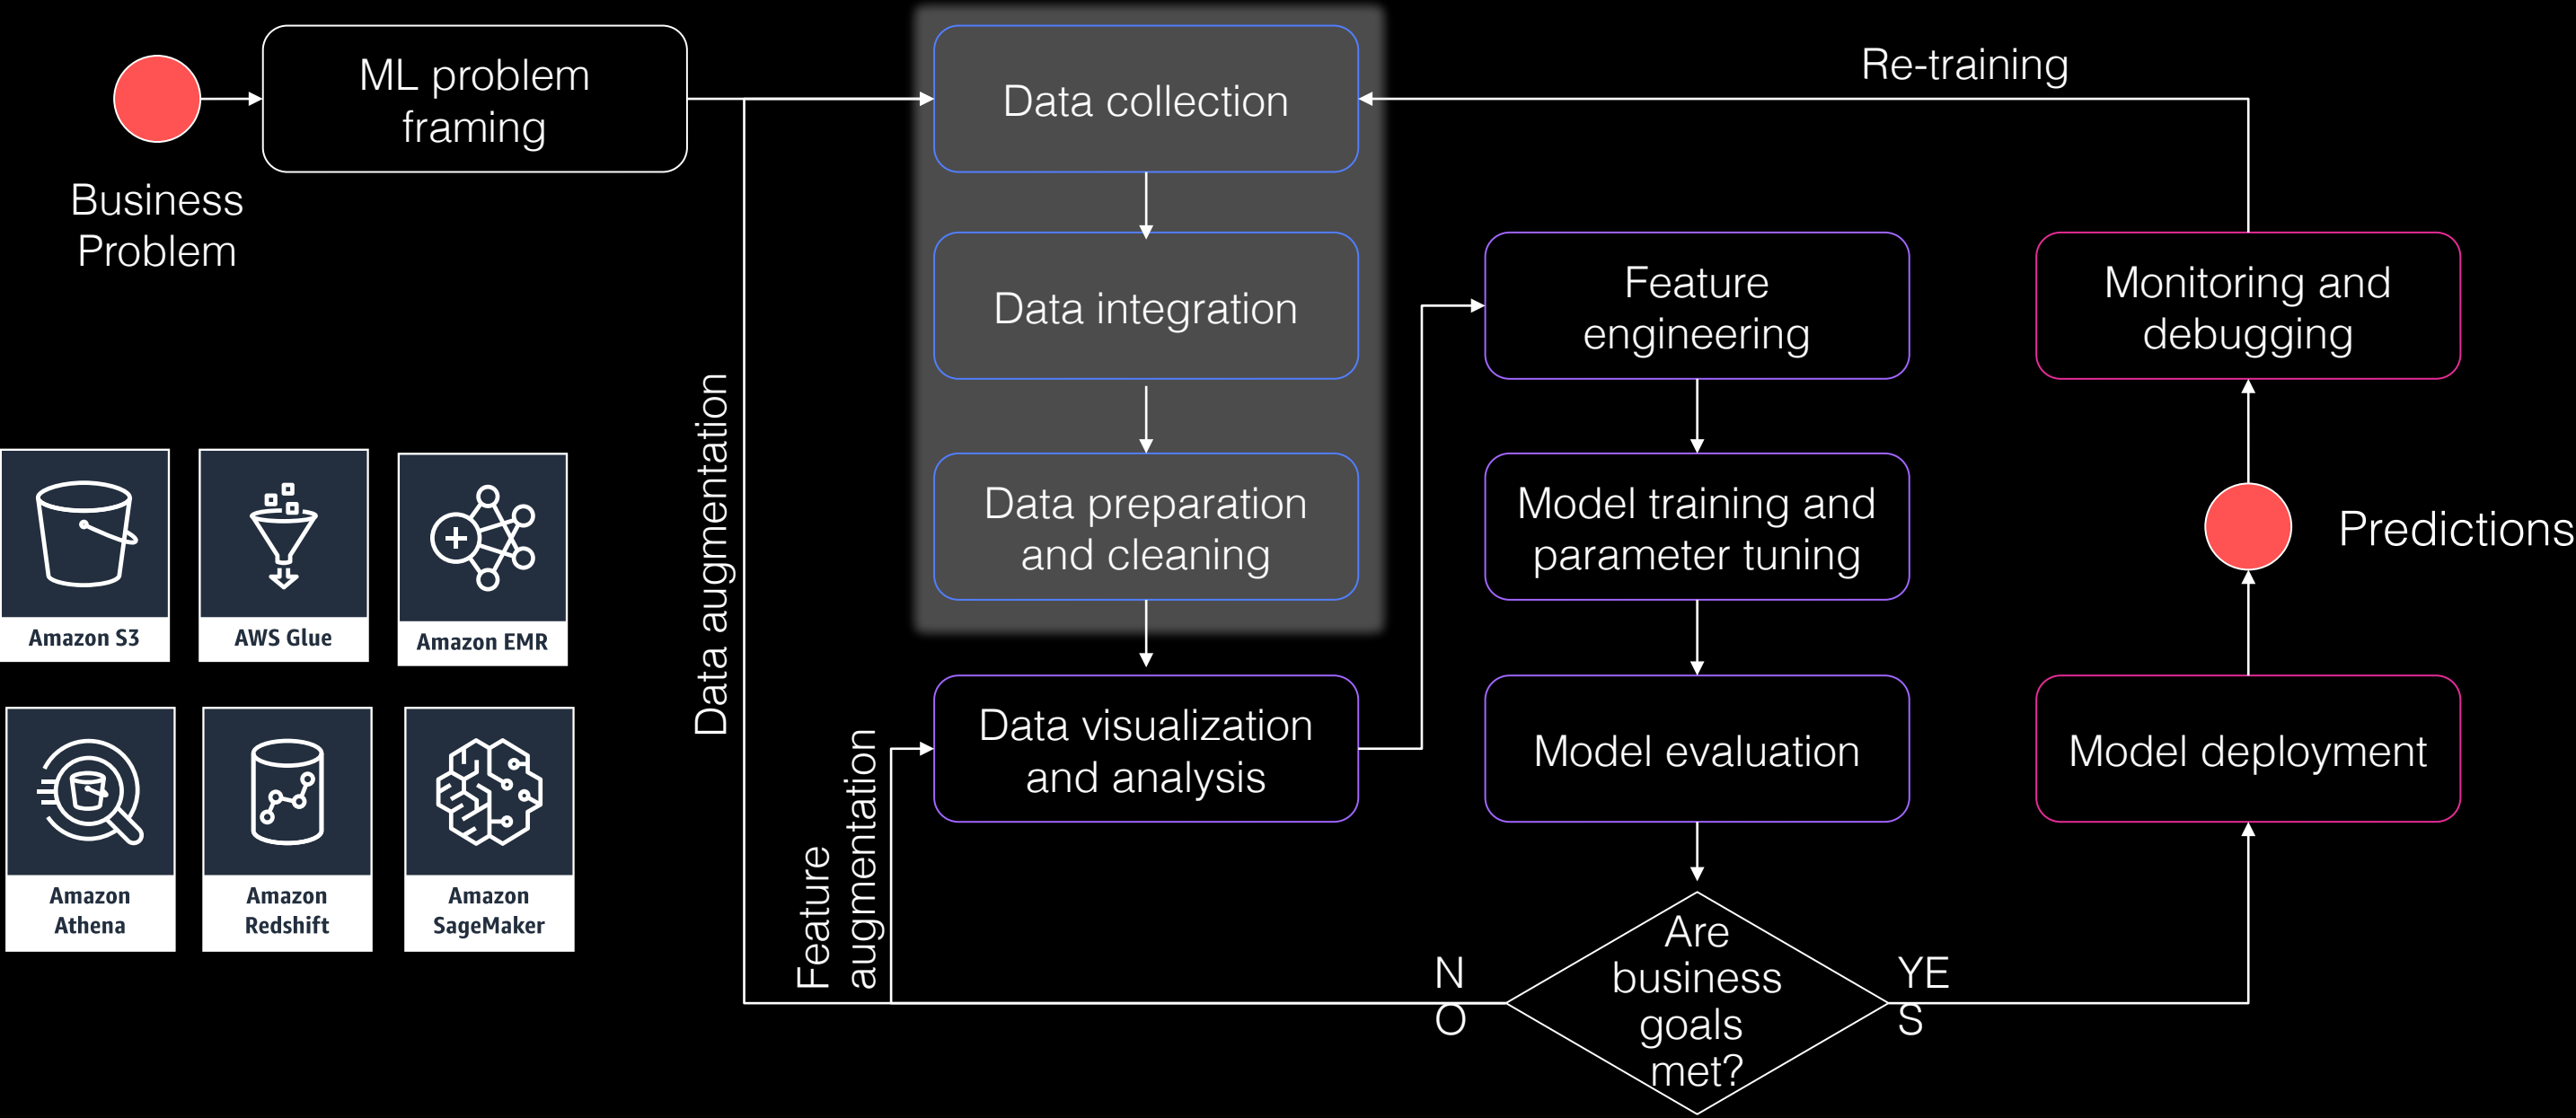

Automatic labeling via  
machine learning

Ready-made and  
custom workflows for  
image bounding box,  
segmentation, and text

Private and public  
human workforce

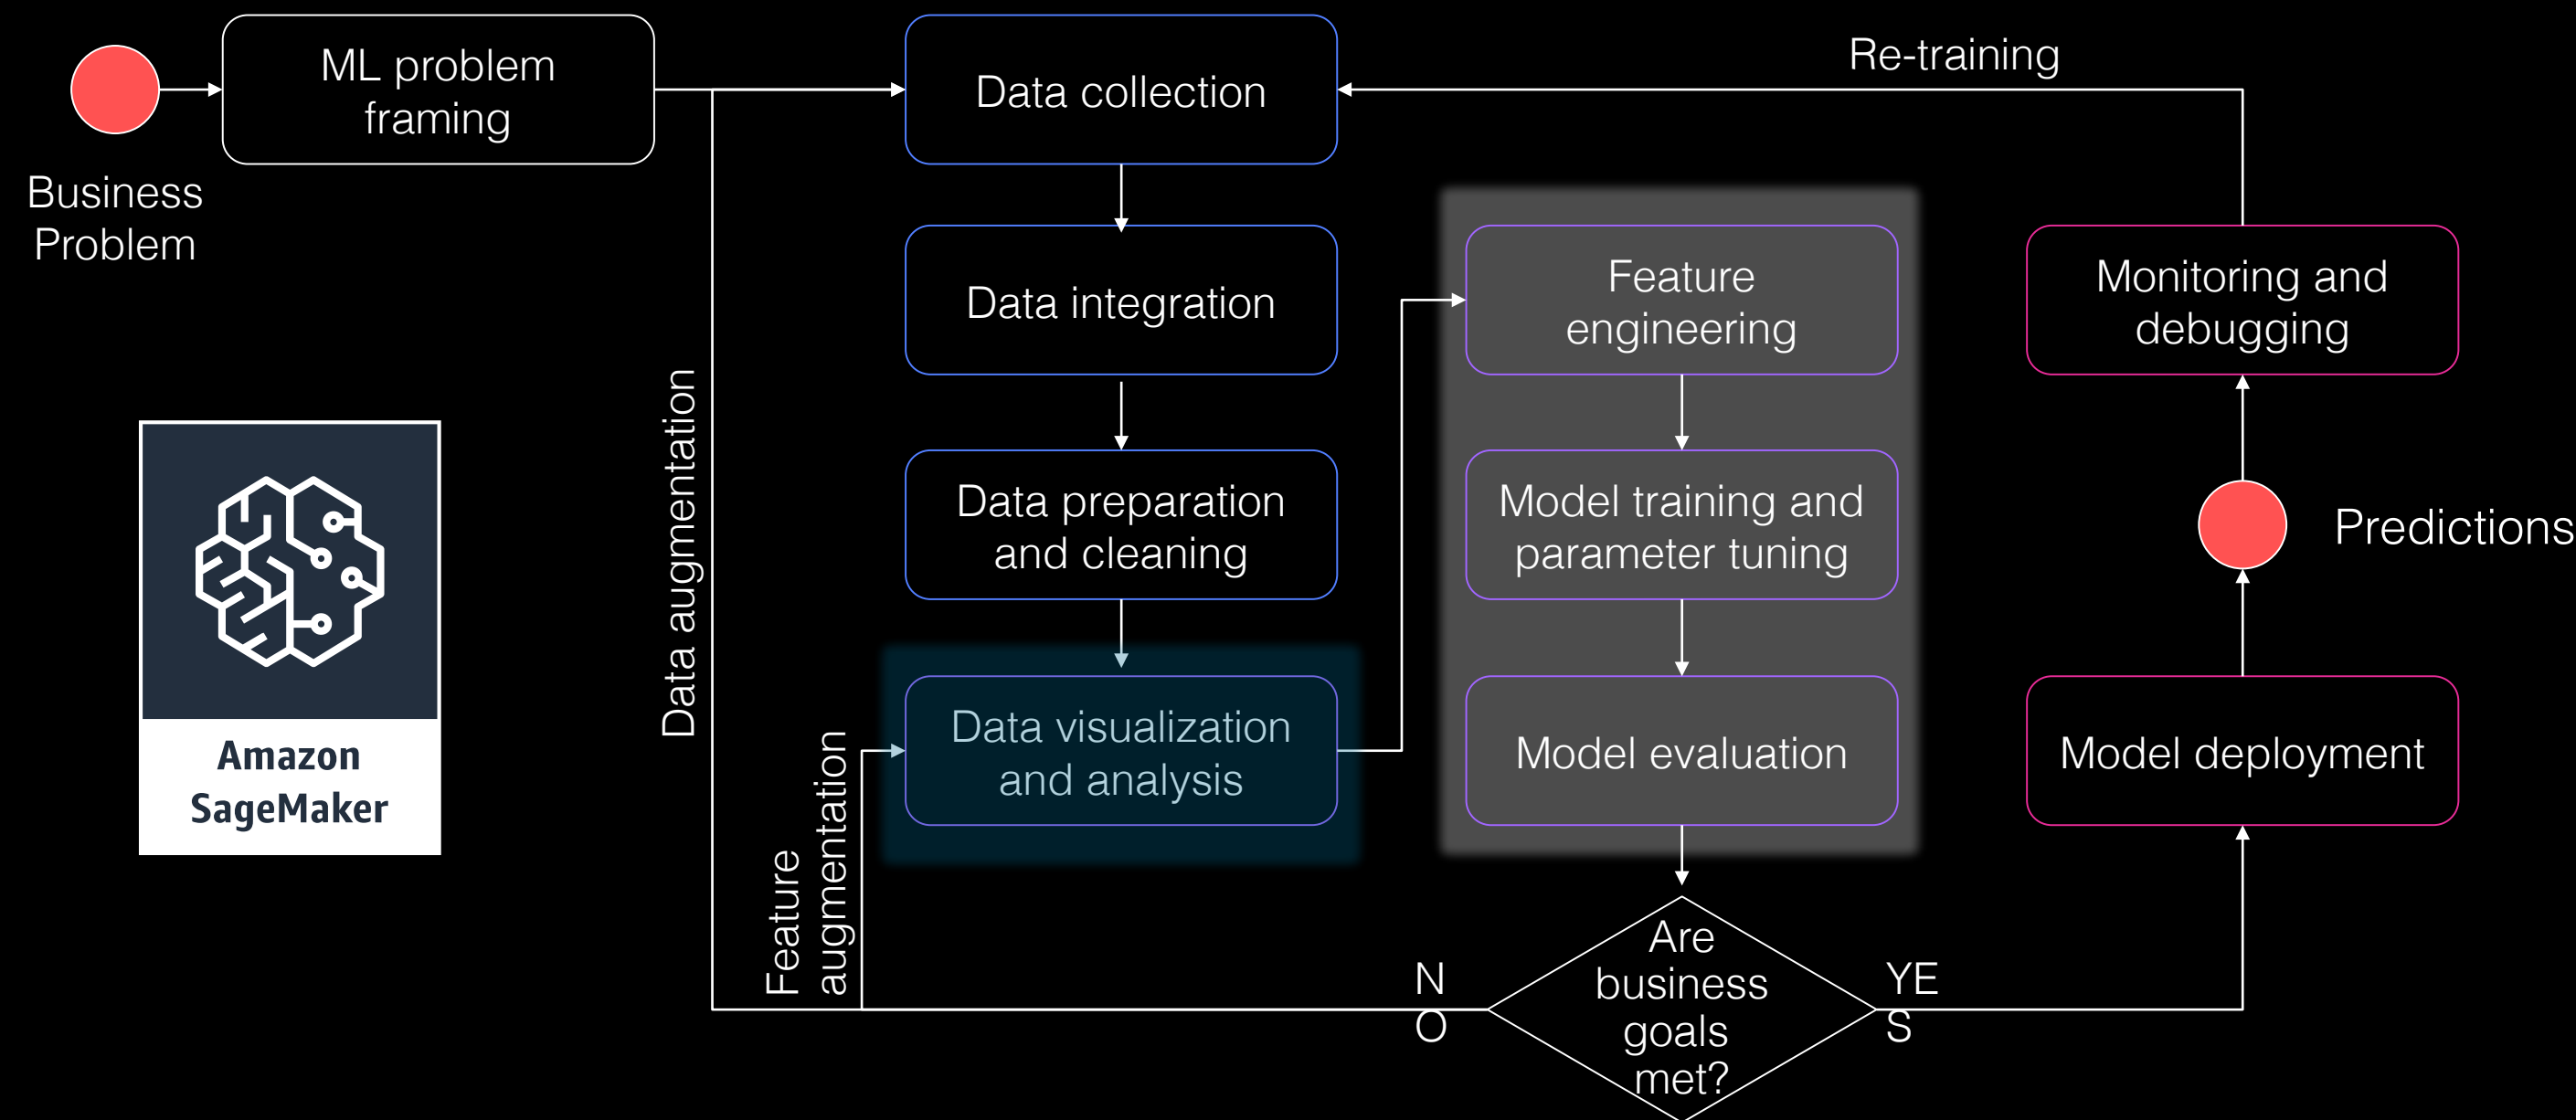

Label  
management

Text Similarity Analyzer

★★★★★ (0) | Sold by TIBCO Software Inc.

Engineers word/document features on a corpus with NLP methods, and uses these features to compare new text to the corpus.

Automatic Image Tagging

★★★★★ (0) | Sold by Sensifai

Automatic Image Tagging and Recognition

Demand Forecasting for Intermittent Data

★★★★★ (0) | Sold by Peak

An ensemble demand forecasting model, for intermittent data

# Working with Amazon SageMaker

# The Amazon SageMaker API

- Python SDK **orchestrating** all Amazon SageMaker activity
  - High-level objects for **algorithm selection, training, deploying, automatic model tuning**, etc.
  - **Spark SDK** (Python & Scala)
- AWS CLI: *'aws sagemaker'*
- AWS SDK: boto3, etc.

# IMAGE RECOGNITION | *for the good of* | PRODUCT SEARCH

**Sébastien BUTREAU**

*sebastien.butreau@tarkett.com*

Group IT Projects & CCOE Manager  
Tarkett

A worldwide leader in flooring & sports surfaces

→ **€2.8B** Net sales  
*(2018 figures)*

→ **13,000**  
employees

→ Present in more  
than **100**  
countries

→ **1.3M square  
meters** of  
flooring sold  
each day

# Could we recommend products to each user?

**VINYL &  
LINOLEUM**

**CARPET**

**WOOD &  
LAMINATE**

**ACCESSORIES  
& RUBBER**

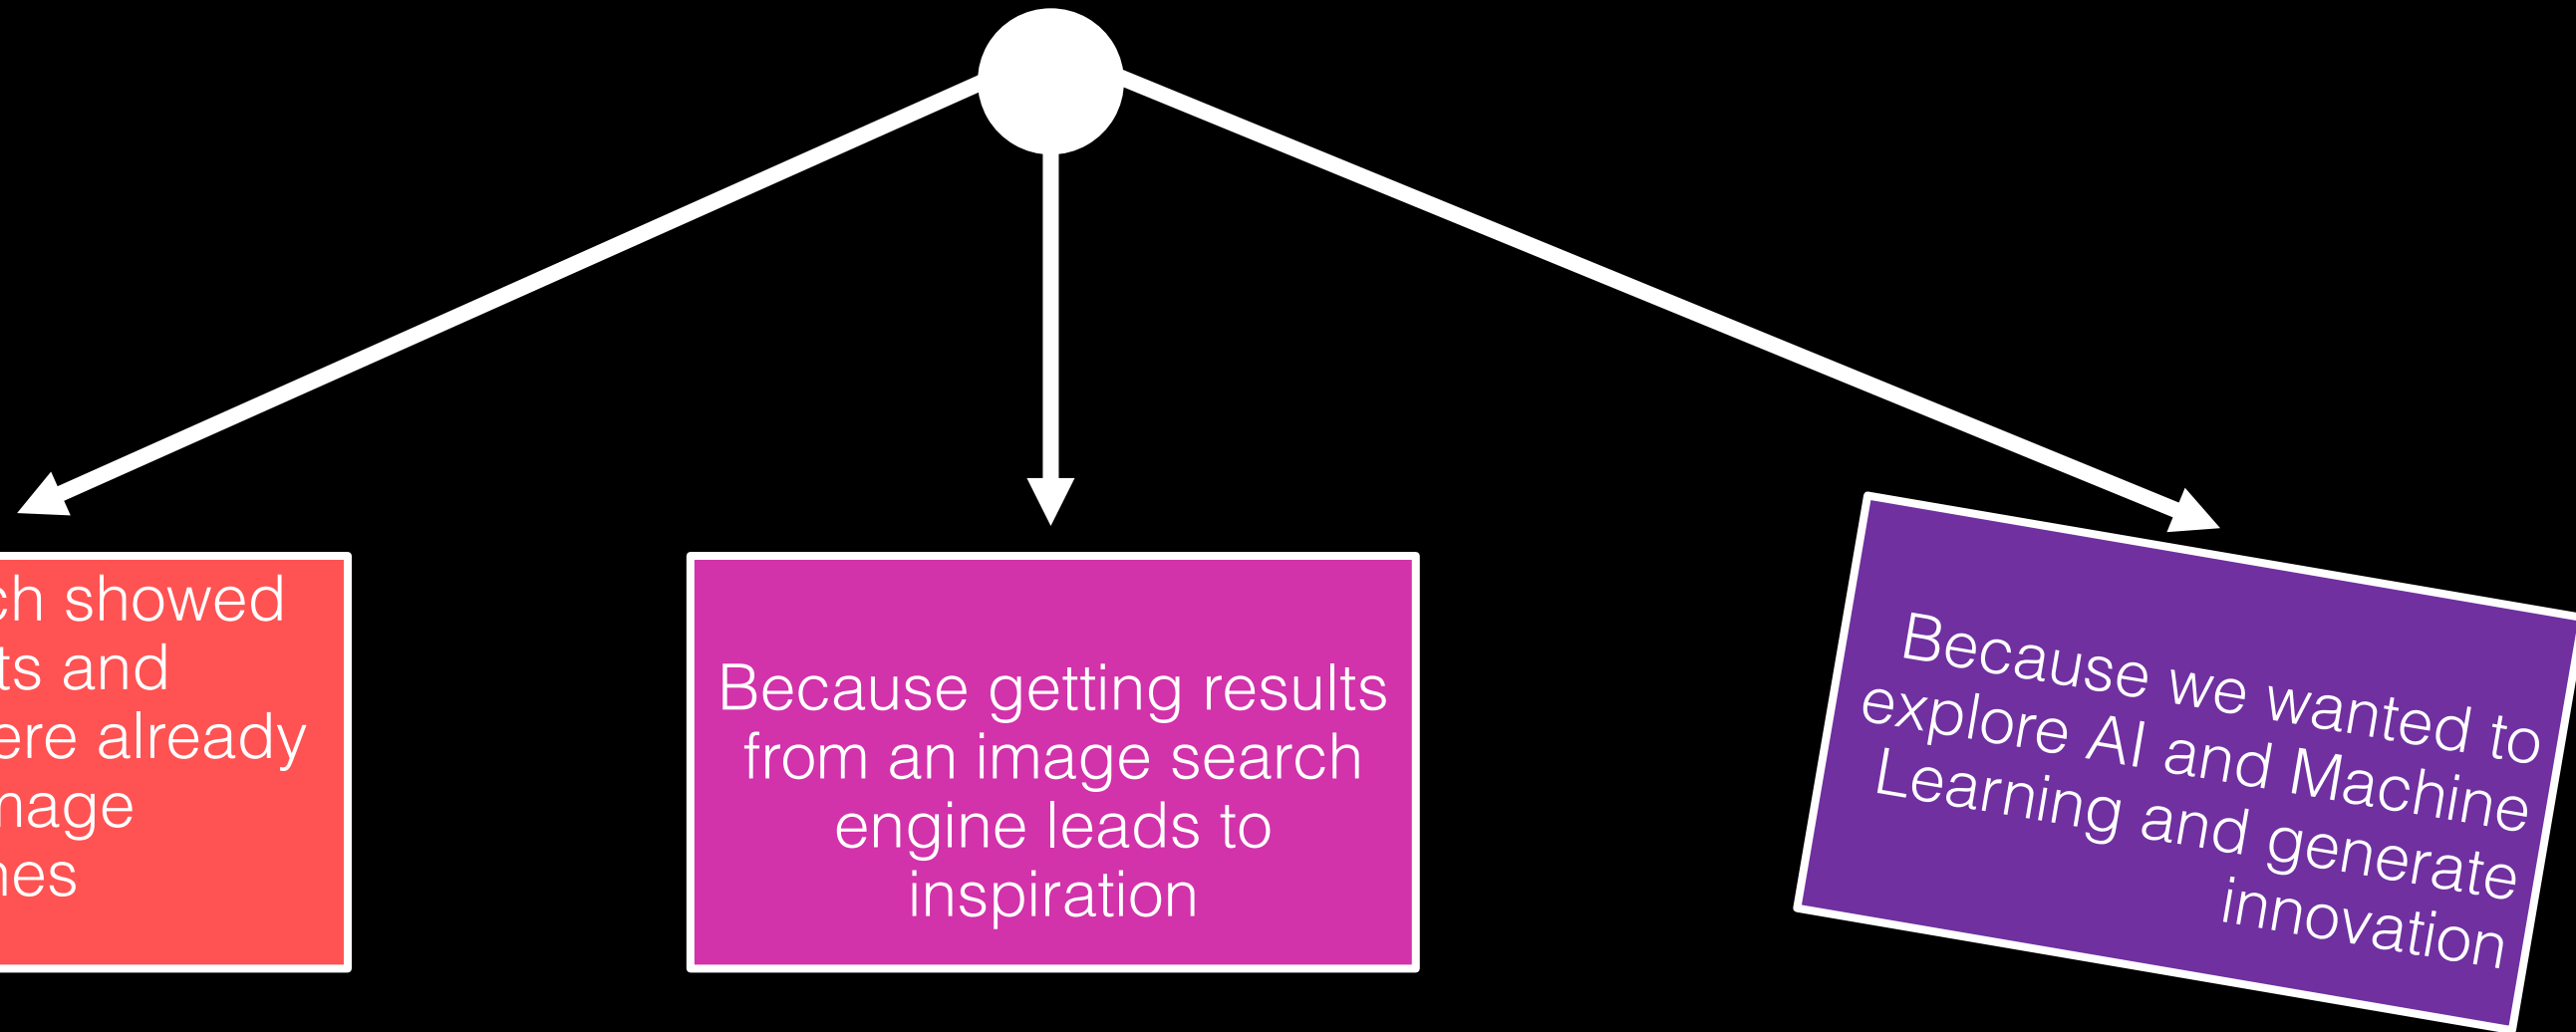

**SPORTS  
SURFACES**

«Building a  
bot»

# Why **image search**?

*Why does it make sense in the context of flooring?*

# Project Aladdin

- Initial experimentation with computer vision algorithms, then switch to **Deep Learning**
- Data set construction
  - Thumbnails from the web site
  - Pictures of our products in the showroom
  - Data augmentation
- Train a VGG16 architecture with **GPU instances** (Amazon EC2 P3)
- Deploy the model and integrate it in the web application

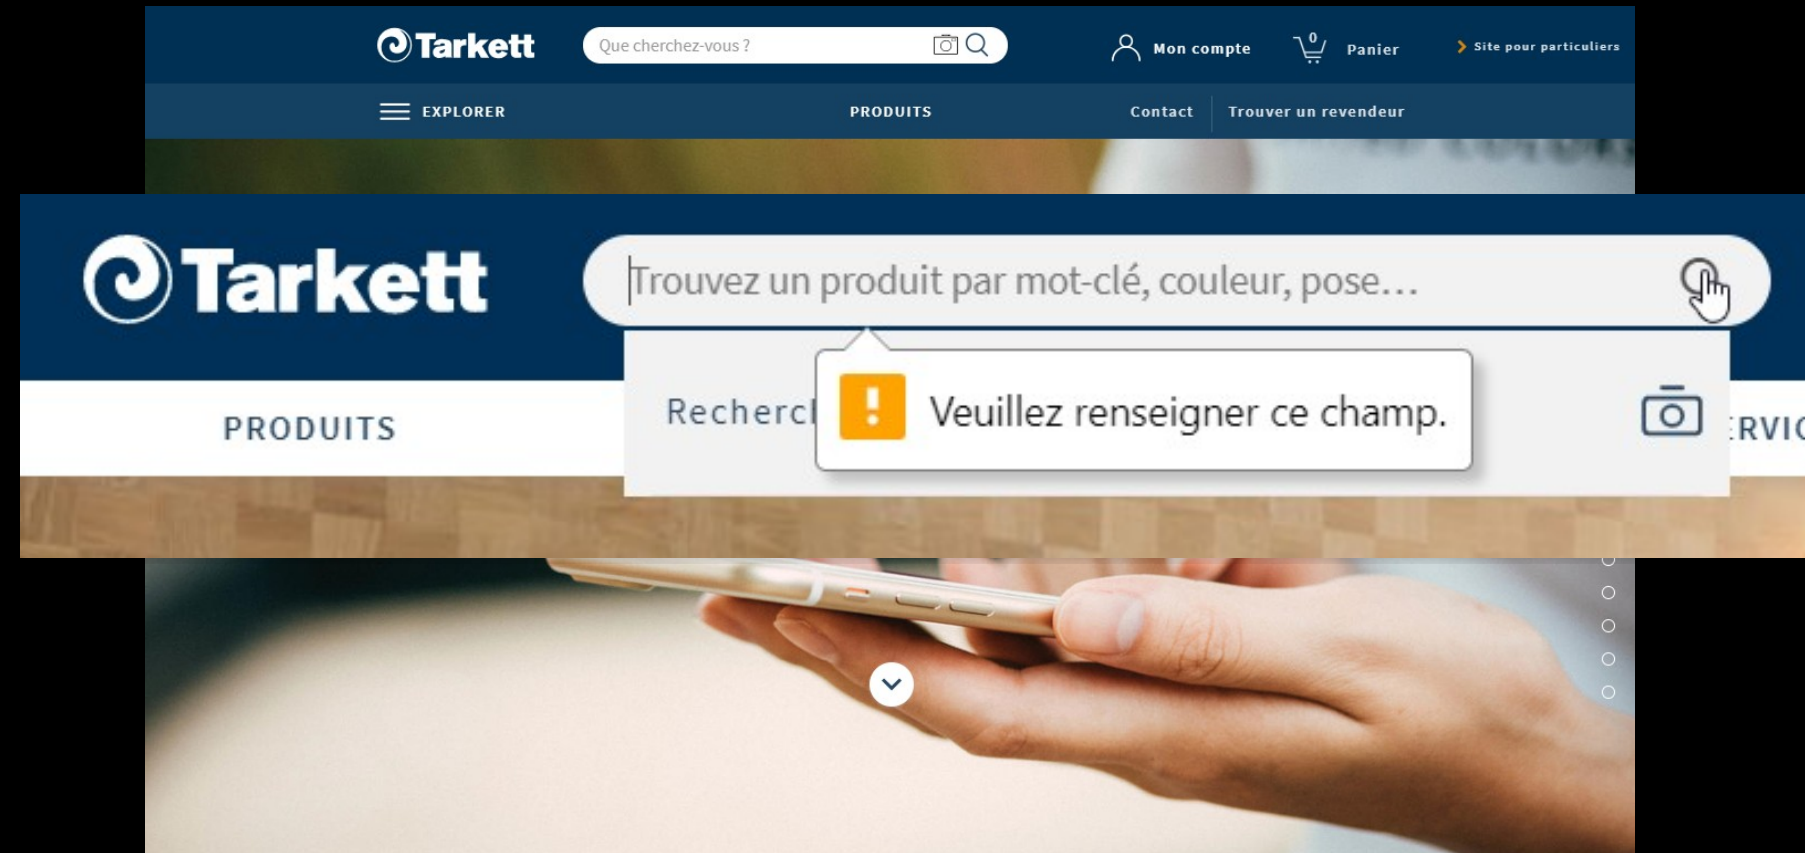

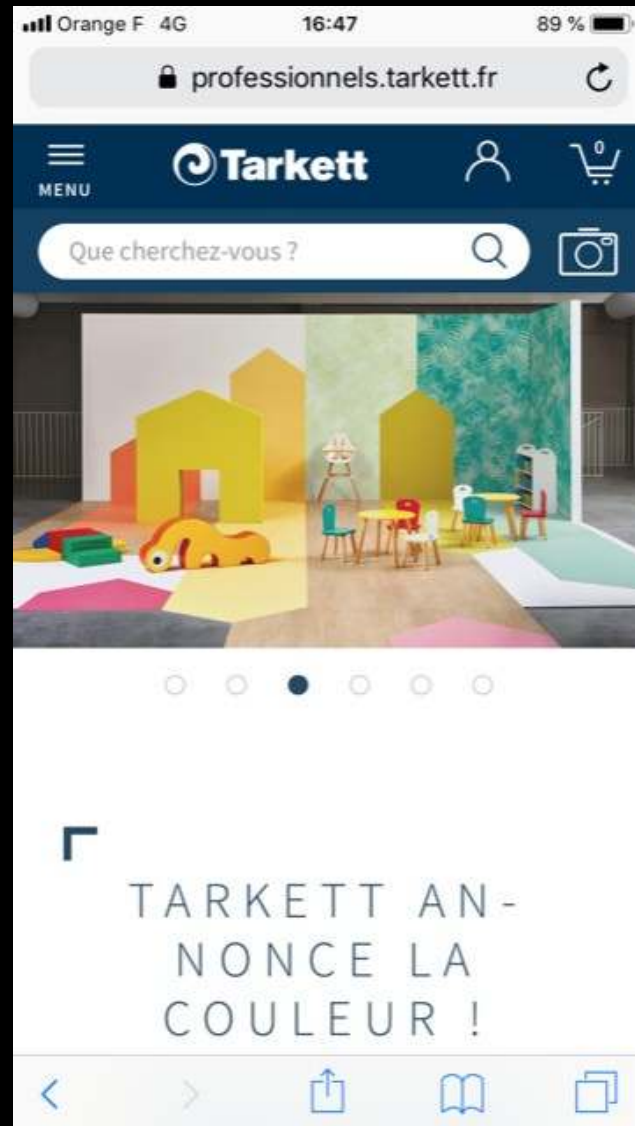

# Why we used Amazon SageMaker

- Go quicker from idea to production
- Distributed training out of the box
- One line of code to deploy models
- Almost the same cost as Amazon EC2 (\$300/month)

Demo: <https://professionnels.tarkett.fr>

# Next steps

Explore new possibilities opened by image search

- Find the best substitution when a product is out of stock
- Understand « in-situ » the real user demand
  - Incorporate external factors (seasons, fashion, styles)
  - Position our products against the competition
  - Generate new designs

**Merci!**
