

Picking the right AWS backend for your Java application

Julien Simon, Principal Technical Evangelist, AWS

julsimon@amazon.fr

@julsimon

What to expect

- Writing Java apps on AWS
- Databases
 - Amazon RDS
 - Amazon DynamoDB
- Analytics
 - Hive on Amazon EMR
 - Amazon Athena
 - Amazon Redshift
- Conclusion

Code available at <https://github.com/juliensimon/aws/tree/master/javabackends>

Writing Java apps on AWS

Four deployment options

Amazon EC2

AWS Lambda

Java 8

Open Source frameworks:
Serverless, Gordon, Apex,

Amazon EC2 Container Service

AWS ElasticBeanstalk

Java 6/7/8 with Tomcat 7/8
Java 7/8 with Glassfish 4

Java **SDK** for the AWS API (Java 1.6+)

<https://docs.aws.amazon.com/sdk-for-java/>

<https://github.com/aws/aws-sdk-java>

AWS plugin for Eclipse

3rd party plugins for IntelliJ IDEA

- AWS Elastic Beanstalk Integration <https://plugins.jetbrains.com/plugin/7274-aws-elastic-beanstalk-integration>
- AWS CloudFormation <https://plugins.jetbrains.com/plugin/7371-aws-cloudformation>
- AWS Manager – almost 2 years old :-/ <https://plugins.jetbrains.com/plugin/4558-aws-manager>

Managing credentials

- Please **do not hardcode** them in your application
- Please **do not store** them on EC2 instances
- It WILL end in tears!

- AWS credentials: use **IAM Roles**
- Backend credentials: use the **EC2 SM Parameter Store**
 - Automatic encryption with Amazon KMS

<https://docs.aws.amazon.com/sdk-for-java/v1/developer-guide/credentials.html>

<https://docs.aws.amazon.com/AWSJavaSDK/latest/javadoc/index.html?com/amazonaws/auth/AWSCredentialsProvider.html>

<https://docs.aws.amazon.com/systems-manager/latest/userguide/systems-manager-paramstore.html>

Scale up/down

Amazon RDS – 6 Database Engines

- Amazon Aurora
- MySQL 5.5.46 → 5.7.16
- MariaDB 10.0.17 → 10.1.19
- PostgreSQL 9.3.12-R1 → 9.6.2-R1
- Oracle 11.2.0.4.v1 → 12.1.0.2.v7
- SQL Server 2008 → 2016

Amazon Aurora demo

Java SDK: <https://docs.aws.amazon.com/AWSJavaSDK/latest/javadoc/com/amazonaws/services/rds/AmazonRDSClient.html>

JDBC drivers: <https://docs.aws.amazon.com/elasticbeanstalk/latest/dg/java-rds.html>

Amazon DynamoDB

AWS Free Tier

Fully Managed NoSQL

Document or Key-Value

Scales to Any Workload

Fast and Consistent

Access Control

Event Driven Programming

<https://aws.amazon.com/dynamodb/>
http://www.allthingsdistributed.com/2007/10/amazons_dynamo.html
<http://www.allthingsdistributed.com/2012/01/amazon-dynamodb.html>

Case Study – Expedia

“

With DynamoDB we were up and running in a less than day, and there is no need for a team to maintain.

Kuldeep Chowhan
Principal Engineer, Expedia

”

Expedia is a leader in the \$1 trillion travel industry, with an extensive portfolio that includes some of the world's most trusted travel brands.

- Expedia's **real-time analytics** application collects data for its “test & learn” experiments on Expedia sites.
- The analytics application processes **~200 million** messages daily.
- Ease of **setup**, **monitoring**, and **scaling** were key factors in choosing DynamoDB.

Amazon DynamoDB demo

Low-level API: getItem, putItem, updateItem
batchGetItem, batchWriteItem
query, scan

High-level API: *DynamoDBMapper*

Java SDK: <https://docs.aws.amazon.com/amazondynamodb/latest/developerguide/CodeSamples.Java.html>
<https://docs.aws.amazon.com/sdk-for-java/v1/developer-guide/examples-dynamodb.html>
<https://docs.aws.amazon.com/amazondynamodb/latest/developerguide/DynamoDBLocal.html>

	Amazon ElastiCache	Amazon DynamoDB	Amazon RDS/Aurora	Amazon ElasticSearch	Amazon S3	Amazon Glacier
Average latency	ms	ms	ms, sec	ms,sec	ms,sec,min (~ size)	hrs
Typical data stored	GB	GB-TBs (no limit)	GB-TB (64 TB max)	GB-TB	MB-PB (no limit)	GB-PB (no limit)
Typical item size	B-KB	KB (400 KB max)	KB (64 KB max)	B-KB (2 GB max)	KB-TB (5 TB max)	GB (40 TB max)
Request Rate	High – very high	Very high (no limit)	High	High	Low – high (no limit)	Very low
Storage cost GB/month	\$\$	¢¢	¢¢	¢¢	¢	¢4/10
Durability	Low - moderate	Very high	Very high	High	Very high	Very high
Availability	High 2 AZ	Very high 3 AZ	Very high 3 AZ	High 2 AZ	Very high 3 AZ	Very high 3 AZ

Hot data

Warm data

Cold data

Analytics

Amazon Elastic Map Reduce (EMR)

- Apache Hadoop, Spark, Hive, etc.
- **Managed** service
- Easy to **start**, **resize** & **terminate** clusters
- Cost-efficient, especially with **Spot Instances**
- Integration with **backends**

Case study – FINRA

FINRA, the primary regulatory agency for stock brokers in the US, uses AWS extensively in their IT operations and has migrated key portions of its technology stack to AWS including Market Surveillance and Member Regulation.

For market surveillance, each night FINRA loads approximately 35 billion rows of data into Amazon S3 and Amazon EMR (up to 10,000 nodes) to monitor trading activity on exchanges and market centers in the US.

Hive demo

Java SDK: <https://docs.aws.amazon.com/emr/latest/ManagementGuide/calling-emr-with-java-sdk.html>

JDBC: <https://docs.aws.amazon.com/emr/latest/ReleaseGuide/HiveJDBCdriver.html>

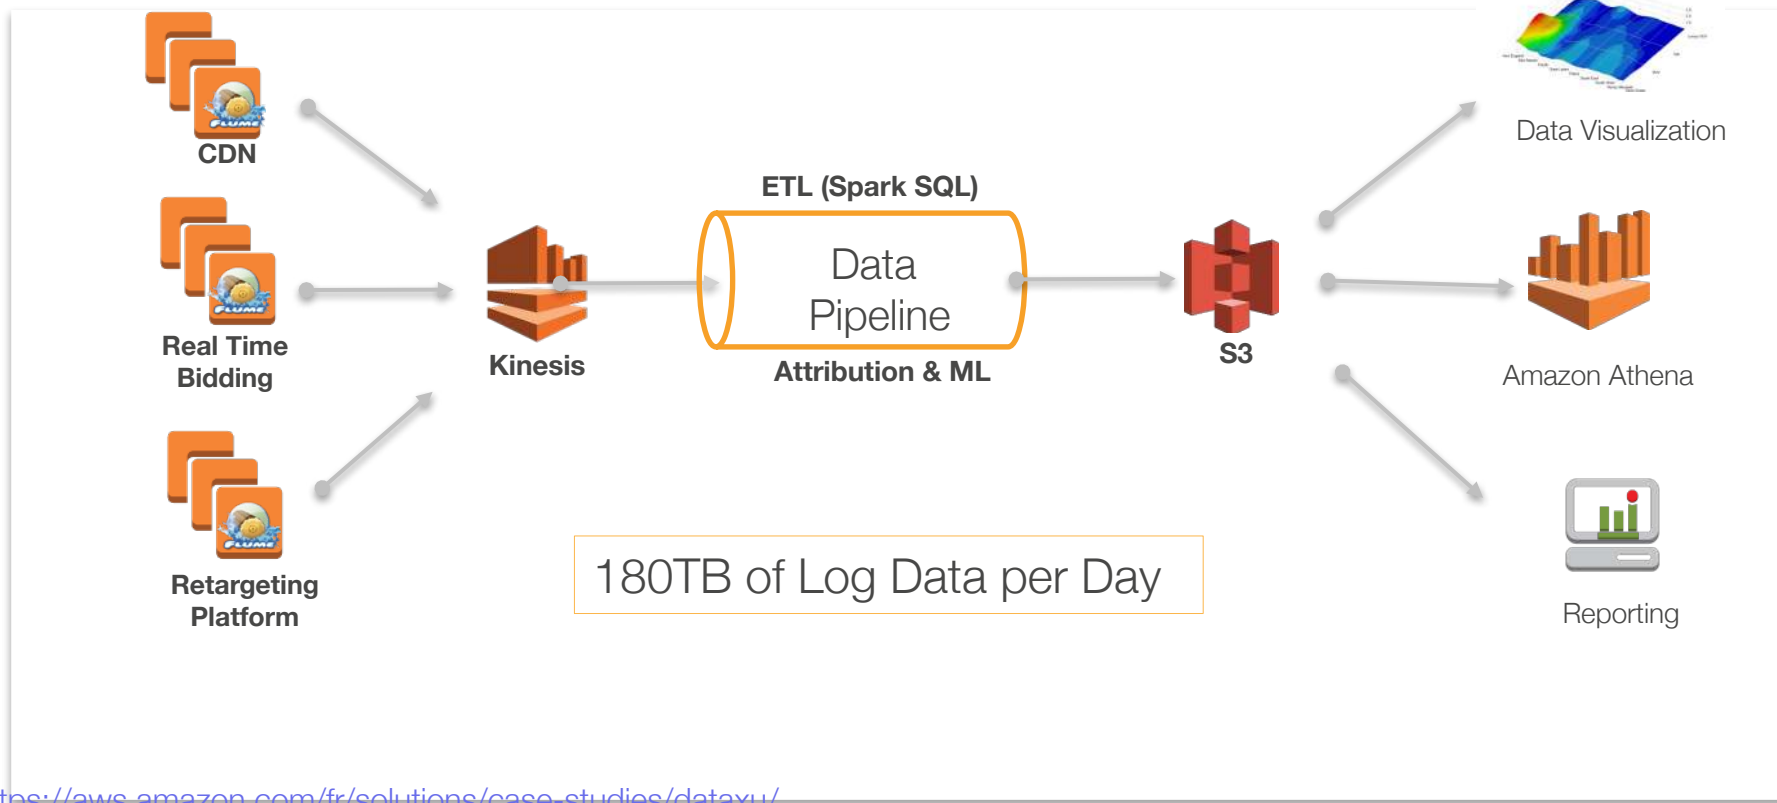

Amazon Athena

- Run read-only SQL queries on S3 data
- No data loading, no indexing, no nothing
- No infrastructure to create, manage or scale
- Service based on Presto
- Table creation: Apache Hive Data Definition Language
- ANSI SQL operators and functions: what Presto supports, with a few exceptions

Data formats supported by Athena

- **Unstructured**
 - Apache logs, with customizable regular expression
- **Semi-structured**
 - delimiter-separated values (CSV, OpenCSV)
 - Tab-separated values (TSV)
 - JSON
- **Structured**
 - Apache Parquet <https://parquet.apache.org/>
 - Apache ORC <https://orc.apache.org/>
 - Apache Avro <https://avro.apache.org/>
- **Compression** (LZO, Snappy, Zlib, GZIP) & **partitioning**

Case Study – DataXu

Amazon Athena demo

Java SDK: <https://docs.aws.amazon.com/athena/latest/ug/code-samples.html>

JDBC: <https://docs.aws.amazon.com/athena/latest/ug/connect-with-jdbc.html>

Amazon Redshift AWS Free Tier

- Relational data warehouse
- SQL is all you need to know
- Fully managed
- Massively parallel
- Petabyte scale
- As low as \$1000/TB/year
- Athena-like capabilities with Redshift Spectrum

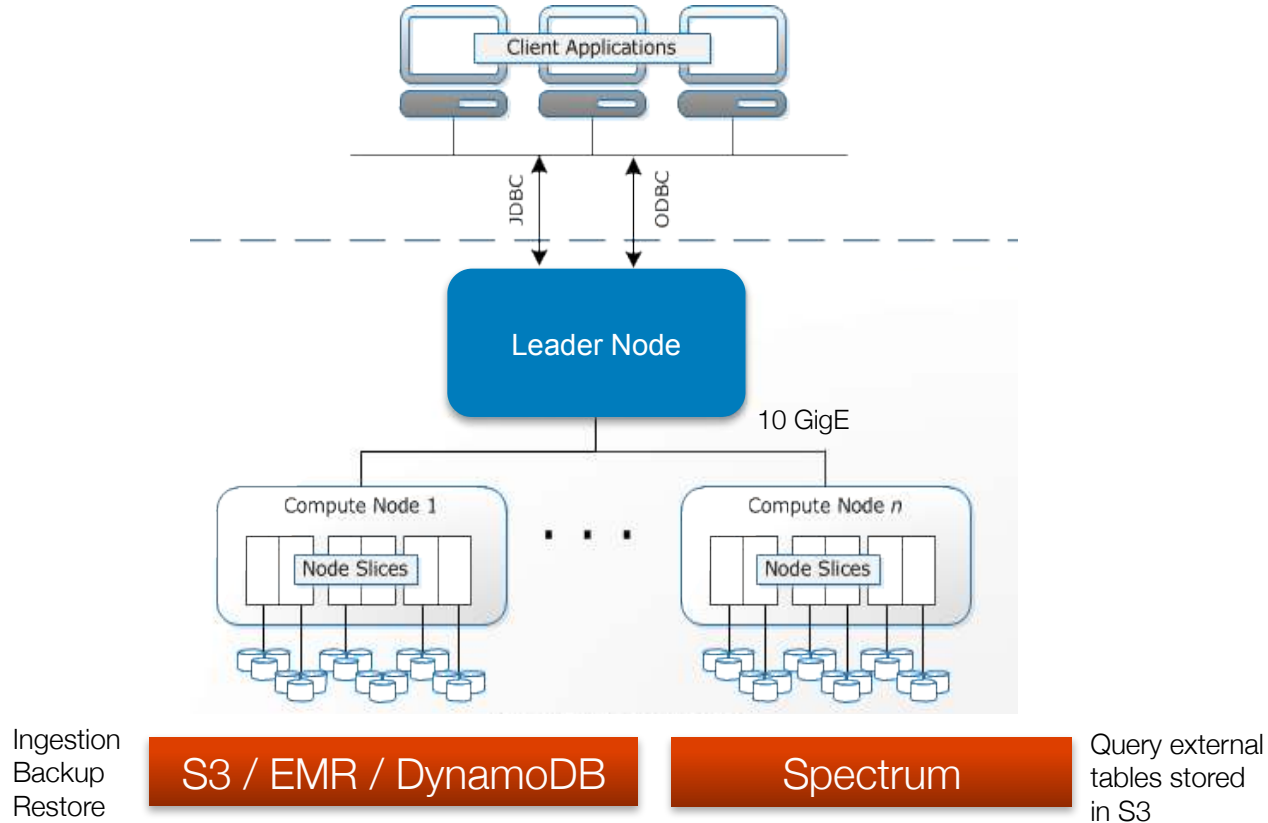

<https://aws.amazon.com/redshift>

<http://www.allthingsdistributed.com/2012/11/amazon-redshift.html>

Intro to Amazon Redshift Spectrum <https://www.youtube.com/watch?v=gchd2sDhSuY>

Amazon Redshift Architecture

What customers says about Amazon Redshift

“Redshift is **twenty times faster than Hive**” (5x – 20x reduction in query times) [link](#)

...[Redshift] performance has blown away everyone here (we generally see **50-100x speedup over Hive**). [link](#)

We regularly process **multibillion row datasets** and we do that in a matter of **hours**. [link](#)

“Queries that used to take **hours** came back in **seconds**. Our analysts are orders of magnitude more productive.” (20x – 40x reduction in query times) [link](#)

“Did I mention it's **ridiculously fast**? We'll be using it immediately to provide our analysts an **alternative to Hadoop**.”

“Team played with Redshift today and concluded it is ***** awesome.
Un-indexed complex queries returning in < 10s.”

Amazon Redshift demo

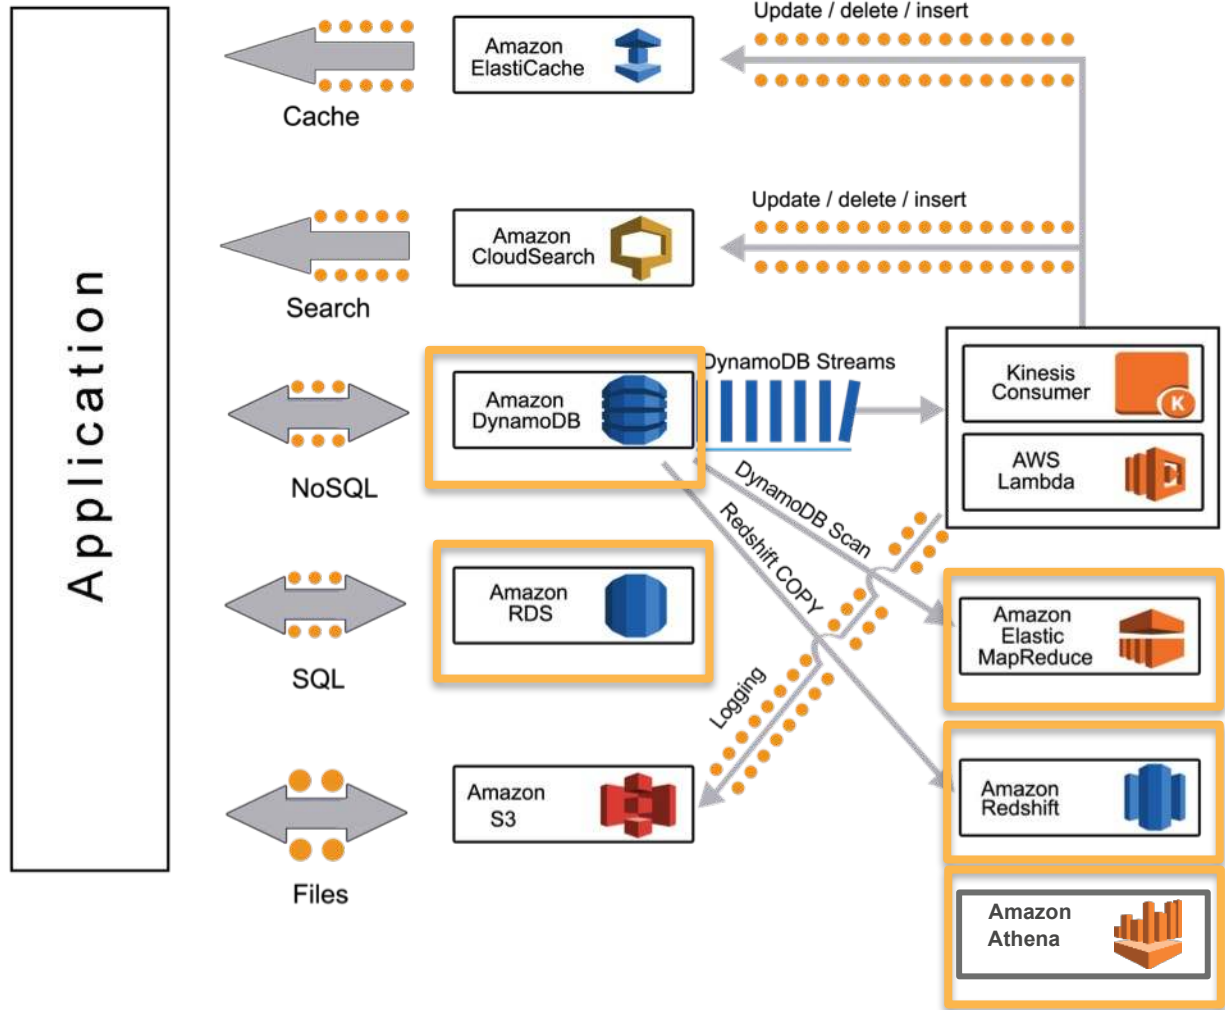

Java SDK: <https://docs.aws.amazon.com/redshift/latest/mgmt/using-aws-sdk-for-java.html>

JDBC driver: <https://docs.aws.amazon.com/redshift/latest/mgmt/configure-jdbc-connection.html>

	Amazon Redshift	Amazon Athena	Amazon EMR		
			Presto	Spark	Hive
Use case	Optimized for data warehousing	Ad-hoc Interactive Queries	Interactive Query	General purpose (iterative ML, RT, ..)	Batch
Scale/throughput	~Nodes Automatic (Spectrum)	Automatic / No limits	~ Nodes		
AWS Managed Service	Yes	Yes, Serverless	Yes		
Storage	Local storage Amazon S3 (Spectrum)	Amazon S3	Amazon S3, HDFS		
Optimization	Columnar storage, data compression, and zone maps	CSV, TSV, JSON, Parquet, ORC, Apache Web log	Framework dependent		
Metadata	Amazon Redshift managed	Athena Catalog Manager	Hive Meta-store		
BI tools supports	Yes (JDBC/ODBC)	Yes (JDBC)	Yes (JDBC/ODBC & Custom)		
Access controls	Users, groups, and access controls	AWS IAM	Integration with LDAP		
UDF support	Yes (Scalar)	No	Yes		

Conclusion

Reference architecture

AWS Schema Conversion Tool

- Converts your **tables, views, stored procedures,** and **data manipulation language** to RDS or Amazon Redshift
- **Highlights** where manual edits are needed

Source Database	Target Database on Amazon RDS
Oracle	Amazon Aurora, MySQL, PostgreSQL, MariaDB
Oracle Data Warehouse	Amazon Redshift
Microsoft SQL Server	Amazon Aurora, MySQL, PostgreSQL, MariaDB
Teradata	Amazon Redshift
Netezza	Amazon Redshift
Greenplum	Amazon Redshift
MySQL and MariaDB	PostgreSQL
PostgreSQL	Amazon Aurora, MySQL, MariaDB
Amazon Aurora	PostgreSQL

AWS Database Migration Service

Amazon Aurora

ORACLE

- ✓ Move data to the **same** or different **database** engine
- ✓ Move data to Redshift, DynamoDB or S3
- ✓ Keep your apps **running** during the migration
- ✓ Start your first migration in **10** minutes or less
- ✓ Replicate **within**, **to**, or **from** Amazon EC2 or RDS

<https://aws.amazon.com/dms/>

http://docs.aws.amazon.com/dms/latest/userguide/CHAP_Introduction.Sources.html

http://docs.aws.amazon.com/dms/latest/userguide/CHAP_Introduction.Targets.html

<https://aws.amazon.com/blogs/database/database-migration-what-do-you-need-to-know-before-you-start/>

AWS is a **rich** and **lively** environment for Java platforms

Your choice of backends: relational, NoSQL, Big Data, analytics

The tools you need, **with less or no infrastructure drama**

Built-in **high availability, scalability, security & compliance**

Focus on **creativity** and **productivity**, not on plumbing

Thank you!
