Summary

Use the right tool for the job

Leverage AWS managed services

Be cost conscious : Big data ≠ big cost

Case study: Prezi

Presentation software (SaaS), 60 million users

"With AWS, we don't have to do any maintenance, and our databases automatically scale to fit our needs.

"Easy access to data has changed our thinking. It has made our business infinitely better."

Case study: Supercell

Mobile gaming, tens of millions of users
45 billion events and 10 TB of data every day

"We don't have to worry about being able to manage our infrastructure to match our growth — AWS tools make it easy for us."

Sami Yliharju Services Lead

Case study: FINRA

Independent regulator for US equities and options trading

Over 10,000 EMR nodes to process 75 billion events daily

FINRA estimates it will save up to \$20 million annually by using AWS instead of a physical data center infrastructure.
